WEEKEND MUSIC RADIO - PDF QSL 2023

WMR has once again been broadcasting on the short wave bands of Europe in May 2023. The first known transmission was on 29th and 30th April on 6284kHz. This was followed the next week, 6th and 7th May, and the following weekend, 13th and 14th, on 6295. These transmissions consisted of old recordings of WMR from 2016, 2014, and other years. The transmissions were not from the WMR transmitters, but presumably the fake / hoax WMR that has shadowed us since the year 2000. Or is it someone new??

We made it known that if new shows were recorded, it would be appreciated if they were given airtime. A 60 minute initial test was recorded and uploaded to the WMR web site on 14th May. The hoax WMR took us a bit by surprise and seemed happy to air it. The first initial test recording was looped / aired on Friday 19th May and all weekend thereafter. Each weekend since then, a new show has been recorded and uploaded. And each week the unid transmitter comes on the air and airs it.

So the former unid transmitter which aired WMR old shows, is now airing current shows for us, and indeed he seems happy to do that, for which we are extremely grateful. But this gives us a slight problem for the QSL cards. The transmission is still UNID to us, and therefore we can't fill in the transmitter power, or indeed even the country of origin. But instead of listeners being disappointed to be told it was a fake transmission, and nothing to do with WMR like in past years, the transmissions now have our blessing, and therefore they are now being verified with this pdf QSL.

So WMR will now QSL these new reception reports that have been coming in over the last few weeks, on the understanding that the QSL is accepted as is, so to speak, but the transmitter location in the case of 6295, and also 6950 is a complete mystery.

As of early June 2023, the so called fake / hoax WMR has been relaying the new shows for the last four weeks. Not only that, but another unid transmitter is coming on the air on a Saturday late night, on 6950 kHz, which is really powering out. Signals are getting out everywhere and reports have included 40 over S9 signals in Poland, various states in North America, as well as Columbia in South America.

And to further the appearance of WMR again on SW, the German station Shortwave Radio / Shortwave Gold has given the new shows a spin on 6160 and parallel 3975!! This multiple one off payout of the current shows is really appreciated, and again has continued for the past few weeks.

An attempt is made on the WMR latest news page to log and list these relay transmissions for each week they are on the air.

BEST WISHES AND A HAPPY SUMMERTIME of SW DX TO ALL.....

JACK R, WMR

Dear Radio Friend,
Thank you for your report of reception of a WMR broadcast
as follows:

DATE: / / 0
TIME: GMT/UTC
FREQ: khz
SINPO:

TRANSMITTER: Watts
ANTENNA: 1/2 wave dipole
LOCATION: Central Scotland
SIGNED:

Your report has been checked against our station log and found to be correct.
It was of great value to our engineering dept.
